**(54) STEROID CREAM PREPARATION****(57)Abstract:**

**PURPOSE:** The titled preparation having improved drug releasability, obtained by blending steroid as a main drug with a solubilizer in such a way that the steroid partially exist in a crystalline state and further with a nonionic surface active agent, a carboxylvinyl polymer as a gelatinizing agent and a water-soluble basic substance.

**CONSTITUTION:** 0.01W~2wt% steroid is blended with 0.5W~20wt% solubilizer such as diisopropyl adipate, diethyl sebasate, etc., 0.1W~5wt% nonionic surface active agent, 0.1W~3wt% carboxylvinyl polymer, 0.005W~1wt% water-soluble basic substance and purified water. The solubilizer is finely granulated and dispersed by the nonionic surface active agent, the carboxylvinyl polymer is neutralized with the water-soluble basic substance and the prepared steroid preparation is adjusted to pH 4W7. Possession of the drug in a crystalline state can except improved steroid releasability and high curing effects.
